Kinan Maarrawi

SOFTWARE ENGINEER · MENG COMPUTER SCIENCE

Computer science student with strong fundamentals and a systems-oriented mindset — shipping real, well-engineered software across full-stack products, functional languages, and low-level systems.

EDUCATION

University of Birmingham

MEng Computer Science with Software Engineering

Dubai, UAE · 2023 – Present

First-class standing — 80% average, 2025/26

TOP MODULES, 2025/26

Functional Programming 99 · AI 2 84 · Operating Systems & Systems Programming 79

TECHNICAL

LANGUAGES

Java, Python, TypeScript, JavaScript, Haskell, C, SQL

TOOLS

Git, React, FastAPI, PyTorch, SQLite, REST APIs

FOCUS

Full-stack development, semantic retrieval, systems and functional programming

LEADERSHIP

Head of Volunteers

Student Entrepreneurship Association · 2024 – 2026

Helped grow SEA from 0 to 500+ members in one academic year; ran on-ground operations for 'Entrepreneurship Day', winner of Outstanding Activity of the Year.

EXPERIENCE

180 Degrees Consulting

Consultant · Oct 2026 – Present

- Sole owner of the volunteer-retention workstream for Thrift for Good, a UAE charity retailer; designing an automated engagement playbook from onboarding to offboarding.

DORZ

Software Intern · Jul – Sep 2025

- Sole engineer on a ride-booking feature for the DORZ app, built end to end without supervision; integrated APIs for fares, live tracking, and saved locations.

SELECTED PROJECTS

Jawab

Python, FastAPI, React · Sep 2026

- Semantic Qur'an search over 6,236 verses in 31 themes; exact matrix-multiply retrieval in ~21 ms, no vector database. Bilingual Arabic/English RTL.
- Rewrote each question into 4–5 register-matched probes, lifting target passages from rank ~300 to rank 1.

Säbener

TypeScript, full-stack · Jul 2026

- Full-stack FC Bayern news dashboard aggregating seven live sources into one normalized, deduplicated feed.
- Automated German-to-English headline translation with a persistent disk cache, surfacing youth-academy coverage absent from English-language media.

Terra-TUI

Haskell · Nov 2025

- Terminal world engine — dynamic viewport rendering, real-time input, and procedural terrain (Perlin-style noise, biomes, deterministic seeds) — built on lazy chunk discovery and pure functional state management.
